Aiming for safer world where nobody gets seriously injured or dies from traffic accidents

Road Traffic Safety Management System Certification (ISO39001)

ISO39001 aims for a society free of serious injuries and fatalities resulting from traffic accidents. It is said that over 1,300,000 people are killed and over 50,000,000 are seriously injured annually in traffic accidents around the world. This has generated much interest internationally in searching for new ways to improve road traffic safety. With this in mind, the most reliable set of minimum requirements for road traffic safety that world has seen to date was published as ISO 39001 in October of 2012.

Benefits of ISO 39001 Certification

- 1 Improves company's brand value and image.
- 2 Reduces safety measure costs.
- 3 Creates a sustainable business structure.
- 4 Leads to fewer traffic accident fatalities and serious injuries.
- 5 Provides opportunity for establishing Road Traffic Safety Management System and helps in setting goals.

Target Organizations

Road Traffic Safety Management is something relevant to all organizations, regardless of business type or scale.

<p>Organizations using trucks for transporting goods or providing business services</p>	<p>Truck, bus, taxi companies</p>	<p>Automobile manufactures</p>	<p>Road authorities designing and operating road</p>
<p>Organizations establishing Road Traffic Safety laws</p>	<p>Parking facilities</p>	<p>Emergency medical care</p>	

Comments from satisfied customers

- We are very pleased because this system allows consistent and comprehensive service to be provided from beginning to end (from actual operation to audit and beyond). The system is set up so that the same person (auditor) can manage the entire process.
- Up until now, our company had safety systems in place for each individual department, but not a comprehensive system for the entire company. By introducing the management system and obtaining certification, we could implement a system for the entire company.
- The systemization of everything makes it easy to verify the causes of accidents that occur as well as to surely develop and implement measures designed to prevent future occurrences of the same accident.
- Auditors are very flexible when it comes to discussing requests and audit scheduling, etc. This is a very good thing.
- Compared to other certification bodies, the audit fees are very reasonable.
- By adding fresh eyes (3rd party certification) to the process, we could discover points that had previously gone undetected by our own internal auditing and that provided by a private auditing company. This allowed us to make improvements to our daily operations which effectively and quickly led to a reduction in accidents.
