MARINE CIRCULAR

3/2008

7 January 2008

FOR: Ship Owners, Ship Managers, Ship Operators, Ship Masters, and Ship Officers

PURPOSE: All Kiribati ships are required to have on board a Ship's Medicine Chest to ensure the health and safety of the ship's crew. Kiribati has accepted the basic standards set by the World Health Organisation (WHO), a specialised agency of the United Nations, that has set standards for medicines and medical supplies that should be maintained on board vessels. This Guideline is intended for use by Kiribati ships that have not yet adopted a standard.

APPLICABILITY: This notice applies to all international sea-going Kiribati ships.

REFERENCES: World Health Organisation (WHO) International Medical Guide.

GUIDELINES:

General Provisions

There are Flag States who have established standards that are equal to, exceed, and/or are more up-to-date than the WHO standards. If these standards are equal to, or exceed, WHO standards, they shall be considered in compliance with Kiribati's requirements.

Assumptions

These guidelines are based on several assumptions:

- 1 Officers designated as "medical care providers" must have proper and adequate training in accordance to STCW standards with regards to the proper utilisation of all medicines or medical supplies on board.
- 2 Reference material or information relating to the use of the medicines carried must be available on board the vessel.
- 3 Medical instructions and their labels should be in a language that is understood by the crew.
- 4 The Master's Medical Guide, or equivalent, should be used as a reference and appropriate radio medical consultation is used for assistance with diagnosis and treatment.

Kiribati Ship Registry

Singapore Operations Office:

10 Anson Road #25-02, International Plaza, Singapore 079903

Tel: +65 6225 0555 Fax: +65 6225 0550 Email: info@kiribaship.com Website: www.kiribaship.com

Requirements of the Ship

- 1 The requirements of the Ship's Medicine List will be based on the vessel's route and number of persons on board.
- 2 Please refer to Annex I for the minimum carriage requirements for medicines and medical equipment to be carried by ships as set by the WHO standards.

Requirements for Controlled Drugs

1. Controlled drugs are drugs that are graded according to the harmfulness attributed to the drug when it is misused. For this purpose, there are three drug categories:
 - . Class A includes heroin, morphine, and opium
 - . Class B includes barbiturates and codeine
 - . Class C includes, among other drugs, anabolic steroids
- 1 A ship shall not carry excess quantities of Class A or Class C drugs unless an explanation is provided to Kiribati and permission has been granted. Morphine Sulphate is the only Class A drug authorised to be carried aboard Kiribati ships.
- 2 It is illegal to destroy Class A and Class B drugs. They can be disposed of by giving them to a person who may lawfully supply them, such as a qualified doctor or a pharmacist. An appropriate receipt shall be obtained and an entry made in the medical log regarding their disposition.
- 3 As certain countries forbid the sale of controlled drugs to ships not registered in that country, ship managers are encouraged to become familiar with the controlled drug distribution laws in the countries where their ships are trading and to communicate directly with the respective authorities to understand the alternatives available for the procurement and delivery of controlled drugs to ships operating in these countries.

Requirements on the Carriage of Defibrillators

- 1 It is not mandatory under international or national legislation for ships to carry defibrillators. It is up to individual ship operators to decide whether or not to include a defibrillator on board their ships.
- 2 However, if a defibrillator is carried, Kiribati recommends that systems be in place to ensure regular maintenance of the equipment (in accordance with manufacturer's instructions), and adequate training for the first aid providers, including regular refresher training (at least every six months). Training should also particularly cover care of the patient after defibrillation since immediate hospitalisation facilities may not be possible most of the time.

Requirements for Ship's Carrying Dangerous Cargoes

1. Ships, including ferries, carrying dangerous cargoes or their residues, should comply with the International Maritime Dangerous Goods (IMDG) Code and the guidance in the IMO/WHO/ILO Medical First Aid Guide (MFAG 1994 and any subsequent amendments) for use in accidents involving Dangerous Goods.

Tel: +65 6225 0555 Fax: +65 6225 0550 Email: info@kiribaship.com Website: www.kiribaship.com

Other Requirements

- 1 All medicines should be kept by the Master, or a responsible officer, to ensure that the medications are properly dispensed and that records are kept on their usage.
- 2 The WHO standards and any equivalent guidelines are minimum carriage requirements. For this reason, the Ship's Medicine List must be inventoried frequently and re-supplied as necessary. In any case, the ship's medicine chest should be inventoried at least once a year.
- 3 Medicines with expiration dates must be replaced at the earliest possible time after the expiry date, and in any case within three (3) months of the expiration date. Once replaced, expired medicines must be removed from the vessel and disposed of properly.
