Notes:

(1) Controlled rolling may be used as the heat treatment procedure in cases where deemed appropriate by the Society.

~~(1)(2)~~ (2) If it is deemed appropriate by the Society, the intermediate heat treatment (the intermediate heat treatment is an operation of cooling from a dual phase composed of austenite and ferrite intended for improving toughness which is carried out prior to tempering) may be applied.

~~(2)~~ Heat treatment may be conducted according to TMCP, subject to the special approval by the Society.

(3) The specified value for U1 test specimen other than those of proportional-size type is to be in compliance with the requirements given in Table K3.16.

(4) *L* (or *T*) indicates that the longitudinal axis of the test specimen is arranged parallel (or transverse) to the final direction of rolling.

(5) When the absorbed energy of two or more test specimens among a set of test specimens is less in value than the specified minimum mean absorbed energy or when the absorbed energy of a single test specimen is less in value than 70 % of the specified minimum average absorbed energy, the test is considered to be failed.

EFFECTIVE DATE AND APPLICATION (Amendment 1-1)

1. The effective date of the amendments is 30 June 2020.
2. Notwithstanding the amendments to the Rules, the current requirements apply to steels for which the application for survey is submitted to the Society before the effective date.
