

The Definition of the Lining used on Ships Carrying Dangerous Chemicals in Bulk

Amended Guidance

Guidance for the Survey and Construction of Steel Ships Part S

Reason for Amendment

Chemical tankers carrying acid are able to use corrosion resistant linings as the corrosion protection system for tanks and piping systems in cases where deemed appropriate by the Society.

With regard to the use of such linings in this manner, IACS, in April 2011, adopted UI CC6 which specifies the definition of “lining” so as to clarify that coatings are not substitutes for linings.

Accordingly, relevant requirements have been amended in accordance with IACS UI CC6.

Outline of Amendment

The definition of “lining” has been specified.
