# Approval Tests of Welding Procedures and Related Specifications for 9 % Nickel Steels

### **Object of Amendment**

Rules for the Survey and Construction of Steel Ships Part M

### **Reason for Amendment**

Requirements for the approval testing of welding procedures and related specifications for welded joints of 9 % nickel steel in Chapter 4 of Part M of the Rules for the Survey and Construction of Steel Ships specify a standard value for tensile tests based on the strength of the weld metal, taking into account that such joints are undermatched (i.e. the strength of the weld metal is lower than the strength of the base metal).

Although current requirements specify a constant value as the evaluation criterion for such tests, weld metal strength is often used as the standard value in actual tank design. Since welding quality has improved over the years due to advances in welding technology improvement, it was decided to specify the specified values for tensile tests according to the type of welding consumable used.

Accordingly, relevant requirements for standard values of tensile tests carried out during the approval testing of welding procedures and related specifications are amended.

At the same time, based on requests from relevant industry members, some of the requirements for the approval testing of steel pipe welding procedures and related specifications are clarified.

#### **Outline of Amendment**

- (1) Specify standard values in accordance with the welding consumable used in tensile tests of 9 % nickel steel joints.
- (2) Clarify conditions under which positions of rotating pipes may be omitted with respect to the scope of approval of welding positions in the approval testing of welding procedures for pipes.

### **Effective Date and Application**

- (1) 4.1.4-2, Chapter 4, Part M of the Rules for the Survey and Construction of Steel Ships Effective date of this draft amendment is the date of establishment.
- (2) Table M4.7, Chapter 4, Part M of the Rules for the Survey and Construction of Steel Ships

This draft amendment applies to tests for which the application is submitted to the Society on or after the date of establishment.

ID: DH24-02
