## **IACS Unified Requirement for Gas-fuelled Engines**

### **Object of Amendment**

Rules for the Survey and Construction of Steel Ships Parts B, D, GF, and N

Rules for the Survey and Construction of Inland Waterway Ships

Guidance for the Survey and Construction of Steel Ships Parts GF and N

Guidance for Automatic and Remote Control Systems

Guidance for High Speed Craft

Guidance for the Survey and Construction of Inland Waterway Ships

Guidance for the Approval and Type Approval of Materials and Equipment for Marine Use

#### **Reason for Amendment**

In 2018, IACS adopted Unified Requirement (UR) M78, which stipulates requirements for trunk-piston engines supplied with low-pressure natural gas. The Society has already incorporated the UR's requirements into Parts GF and N of its Rules for the Survey and Construction of Steel Ships (hereinafter referred to as "Part GF of the Rules" and "Part N of the Rules", respectively).

For engines supplied with high-pressure gas fuel, IACS did adopt UR M59 in 1996, but it was deleted in 2019 because some of the requirements became inconsistent with the revised version of the IGC Code (MSC.370(93)) that entered into force in 2016. Since 2019, the Society has basically been conducting examinations for such engines based partially on UR M78 in addition to its own requirements for high-pressure gas-fuelled engines, which it established in 1995.

Subsequently, IACS reviewed UR M78 and discussed whether it could be revised to also apply to high-pressure gas-fuelled engines and crosshead engines. As a result of its review, IACS adopted UR M78(Rev.2) in January 2024.

Accordingly, relevant requirements are amended based on UR M78(Rev.2).

#### **Outline of Amendment**

The main contents of this amendment are as follows:

- (1) Renames Annex 1.1.3-3, Part GF of the Rules and Annex 16.1.1-3, Part N of the Rules from "Low Pressure Gas-Fuelled Engines" to "Gas-Fuelled Engines" and added the requirements for 2-stroke engines and high pressure gas-fuelled engines to those annexes.
- (2) Adds test requirements for pipes which transfer gas fuel and their associated fittings.
- (3) Deletes Annex 1.1.3-2 "High Pressure Gas-Fuelled Engines" from Part GF of the Rules and Annex 16.1.1-2 "High Pressure Gas-Fuelled Engines" from Part N of the Rules.

#### **Effective Date and Application**

This draft amendment applies to engines for which the application for approval of use is submitted to the Society on or after 1 January 2025.

An asterisk (\*) after the title of a requirement indicates that there is also relevant information in the corresponding Guidance.

ID: DD24-12

| 1 Certified safe equipment is equipment certified by an independent national test institution or competent body to be in accordance with a recognised standard for electrical apparatus in hazardous areas. Refer to IEC 60079 series, "Explosive atmospheres" and IEC 60092-502:1999 "Electrical installations in ships – Tankers – Special features"  | 1 Certified safe_type means electrical equipment that is certified in accordance with the recommendation published by the International Electrotechnical Commission (IEC), in particular publication IEC 60092-502:1999, or with recognized standards at least equivalent. The certification of electrical equipment is to correspond to the category and group for methane gas.    |                      |
| 2 Double block and bleed valves means a set of two valves in series in a pipe and a third valve enabling the pressure release from the pipe between those two valves, specified in 2.2.1-9, Part GF of the Rules. The arrangement may also consist of a two-way valve and a closing valve instead of three separate valves. The valves are to be in accordance with 9.4.4 to 9.4.6, Part GF of the Rules. | 2 Double block and bleed valves means a set of two valves in series in a pipe and a third valve enabling the pressure release from the pipe between those two valves, specified in 2.2.1-9, Part GF of the Rules. The arrangement may also consist of a two-way valve and a closing valve instead of three separate valves. The valves are to be in accordance with 9.4.4 to 9.4.6. | Clarified            |

|   | on Table (IACS Unified Requirement for Gas-fuelled E   |                                     |
|---|--|-------------------------------------|
| Amended   | Original   | Remarks                             |
| 2 Temperatures and pressures (or flow rates) of gas fuel supplied to gas-fuelled engines are to be automatically controlled.  | 2 Temperatures and pressures (or flow rates) of gas fuel supplied to <u>low-pressure</u> gas-fuelled engines are to be automatically controlled. <u>In addition, visual and audible alarm devices which activate when temperatures and pressures exceed preset ranges are to be provided.</u>  | Merged into Table 3.1               |
| 3 (Omitted)   | 3 (Omitted)  |                                     |
| 4 The gas <u>admission</u> valves are to be controlled by the engine control system or by the engine gas demand.  | 4 The gas <u>supply</u> valves are to be controlled by the engine control system or by the engine gas demand.  |                                     |
| 5 (Omitted)   | 5 (Omitted)  |                                     |
| 6 (Omitted)   | 6 (Omitted)  |                                     |
| 7 (Omitted)   | 7 (Omitted)  |                                     |
| 8 Unless risk analysis by a method deemed appropriate by the Society otherwise proves that risk is within the acceptable range otherwise, alarm and safety system functions for dual fuel or gas only engines are to be provided in accordance with Table 3.1 (for dual fuel engines, Table 3.1 applies only to the gas mode). However, even if risk analysis proves that risk is within the acceptable range, the alarm and safety system functions specified in Part GF of the Rules are still to be provided. Additional alarms and safety devices may be required if deemed necessary by the Society. | 8 Unless risk analysis by a method deemed appropriate by the Society otherwise proves that risk is within the acceptable range otherwise, alarm and safety system functions for dual fuel or gas only engines are to be provided in accordance with Table 3.1 (for dual fuel engines, Table 3.1 applies only to the gas mode). However, even if risk analysis proves that risk is within the acceptable range, the alarm and safety system functions specified in Part GF of the Rules are still to be provided. | Relocated from 3.2(1)(c) and (2)(d) |
| 3.2 Gas-fuelled Engines of Ships Subject to the Rules for Automatic Remote Control Systems  | 3.2 <u>Low Pressure</u> Gas-fuelled Engines of Ships Subject to the Rules for Automatic Remote Control Systems   |                                     |
| Gas-fuelled engines of ships subject to the application of the Rules for Automatic and Remote Control Systems are also to be in accordance with the requirements in 3.2, 3.3 and 4.2 of said rules.   | Low pressure gas-fuelled engines of ships subject to the application of the Rules for Automatic and Remote Control Systems are to be in accordance with the requirements in 3.2, 3.3 and 4.2 of said rules. In addition, such engines are to be in accordance with the following (1) and (2) requirements:   |                                     |

| Amended   | Original  | Remarks               |
|-----------|---|-----------------------|
| (Deleted) | (1) Low pressure gas-fuelled engines are to be provided                           |                       |
|           | with safety systems which automatically cut off the                               |                       |
|           | gas fuel supplies when any one of (a), (b) or (c) given                           | Merged into Table 3.1 |
|           | below occur. In addition, in the case of dual fuel                                |                       |
|           | engines, such systems are to automatically switch the                             |                       |
|           | mode of operation to oil fuel only or are to stop the                             |                       |
|           | engines. Automatic cut off of the gas fuel supplies                               |                       |
|           | with the double block and bleed valves specified in                               |                       |
|           | 9.4.4, Part GF of the Rules, however, may be                                      |                       |
|           | accepted.   |                       |
